

p/n UF300

The Tank Carrier is used to secure a scuba cylinder inside of the UFO for hookah use. It fits cylinder diameters from 6.9 - 8.0 in. (175-203 mm). It includes 4 stainless steel clips for attachment as well as a co-molded carry handle for transporting your cylinder apart from the UFO. Internal rubber traction pads prevent cylinder slippage.

Tank Carrier

Instructions For Use

www.XSscuba.com

NOTE: For a cylinder to properly nestle in to the UFO and lie level, it is necessary to deflate the UFO's center bladder by one half to two-thirds (Fig 1). Keeping the center bladder fully inflated results in the rear of the cylinder being lifted, causing instability of the unit.

Installation

Slide the two tank bands down your cylinder keeping them roughly 9 in. (23 cm) apart. Pull the loose end of the webbing as tight as you can before securing it with the hook and loop fastener (Fig 2).

Lay the cylinder into the UFO. Slide the Tank Carrier up or down, as needed, so that the 4 D-rings on the Tank Carrier align with the 4 D-rings along the sides of the UFO. Use the 4 clips to attach the Tank Carrier D-rings to the UFO D-Rings (Fig. 3).
